What is the Intelligent Enterprise?

The Intelligent Enterprise leverages emerging technologies such as artificial intelligence (AI), machine learning (ML), the Internet of Things (IoT), and analytics to enable the workforce to focus on higher value outcomes.

Intelligent enterprises achieve breakthrough outcomes

- **Fidelity**: The ability to collect and connect data that was previously siloed, and recognize unseen patterns
- **Focus**: The ability to identify the most practical options, and direct scarce resources to the areas of maximum impact
- **Agility**: The ability to respond faster to changes in the marketplace or the business and pivot business processes towards the right customer outcomes

Intelligent enterprises differentiate through three key capabilities

- **Intelligent enterprises elevate employees to focus on higher value tasks**
- **Intelligent enterprises deliver a step change in productivity**
- **Intelligent enterprises transform workforce engagement**

Intelligent Suite

- In simple terms, our customers leverage the intelligent suite to automate their day-to-day business processes and interact with their employees through applications that have intelligence embedded.

Digital Platform

- To facilitate the collection, connection, and orchestration of data as well as the integration and extension of processes in our integrated applications.

Intelligent Technologies

- Enable our customers to leverage their data to detect patterns, predict outcomes, and suggest actions.

SAP’s framework for the Intelligent Enterprise consists of three components

- **Integration**: End-to-end integration across the processes that matter most to your business, built on common master data, domain models, and platforms.
- **Industry expertise**: To help make sense of your data in the specific context of your business, using insights about your own performance to optimize algorithms.
- **Intelligence embedded**: Directly into our applications as part of our standard roadmap.

SAP is uniquely positioned to deliver on the vision of the Intelligent Enterprise
