Digital Supply Chain

Keep your in-plant, distribution center, and supply chain data in sync with SAP S/4HANA’s integrated highway of supply chain applications to give you a comprehensive view of your entire supply chain.

Advanced data collection powered by SAP S/4HANA can help you:

- Increase operational efficiency by improving collaboration between sites
- Optimize the way you make decisions by gaining visibility into your entire supply chain
- Increase productivity and reduce operating costs by making every step of the supply chain visible
- Reduce costs by optimizing your network through efficient, effective decision-making
- Optimize inventory coverage and reduce costs from supplier to distribution center to store to customer.

SAP S/4HANA for Warehouse Management helps you:

- Leverage item serialization for automation and product traceability
- Manage demand and supply segmentation with high periods, and end periods, and end
- Manage demand and supply match intelligently while improving customer satisfaction
- For each location, create flexible assignments of demand to supply, optimizing inventory by location using size distribution curve
- Create an automated environment for freight tendering using a range of visualization and reporting tools, so you can optimize resource real time and enhance customer satisfaction
- Integrate plans for demand, supply, and capacity and improve the ultimate in visibility and control
- Optimize inventory levels using size distribution curve optimization.

SAP S/4HANA for Transportation Management helps you:

- Increase warehouse efficiency through improved visibility, improved resource utilization and reduced costs
- Deliver on your promise to customers by tracking the status and fulfillment of processes and goods in transit across your global delivery network
- Ensure secure and compliant transportation planning and predictive insights based on consumer demand forecasting
- Automate and target distribution with allocation strategies that analyze product demand by location
- Utilize SAP Extended Warehouse Management for a range of visualization and reporting tools to optimize resource real time and enhance customer satisfaction
- Achieve a near real-time view on inventory with a range of visualization and reporting tools to optimize resource real time and enhance customer satisfaction
- Plan independent requirements for use in material requirements planning and predictive insights based on consumer demand forecasting
- Optimize inventory levels using size distribution curve optimization.
