The manufacturer was spending 40 times longer on reporting and related operations than necessary.

Himachal Futuristic Communications Ltd. (HFCL) manufactures telecommunications equipment, fiber optic cable, and intelligent power systems, supporting new, high-growth opportunities in railways, homeland security, smart cities, and defense. The company was spending excessive amounts of time and data storage on its month-end reports, and its data transactions were inefficient, which impacted operations.
A powerful digital core is helping HFCL achieve its mission to provide **industry-leading products** to its customers.

Working with SAP partner itelligence, HFCL converted its SAP® ERP application to SAP S/4HANA® to improve operational efficiency, enabling the company to improve performance dramatically in these ways:

- Reduction in data volume from 184 GB to 139 GB
- Six times faster backup
- 98% less time needed to execute month-end reports
- More effective control of the supply chain
- Ability to provide stakeholders with real-time, actionable data
- Automatically triggered alerts, workflows, and reminders for purchase requisition and purchase-order approvals
- Improved productivity and faster decision-making
- Reduction in database size, with a higher compression ratio in SAP S/4HANA

“Converting from SAP ERP to SAP S/4HANA is a major milestone in our IT strategy. It aligns with our growth plans and is expected to play a **key role in our overall success**.”

Ajay Srivastava, Head of Information Technology, Himachal Futuristic Communications Ltd. (HFCL)

“SAP S/4HANA standardizes controls and reduces risk, so **operations are more efficient**. Decision-making is faster and information driven, giving us a definite competitive edge.”

V.R. Jain, Chief Finance Officer, Himachal Futuristic Communications Ltd. (HFCL)
