Optimize project planning, execution, and collaboration for the right real-time information in oil and gas.

### Engineering

- **Control Design and Engineering**
  - Author and Publish Visualization: Access, visualize, author, and publish 3D CAD data without specialized licenses or knowledge.
  - Integrated Product Development: Accelerate product ideation and development with real-time tools that integrate the design process.
  - Visualization Generation and Integration: Convert 3D CAD files into neutral files with visually generated content with integrated business data.
  - Model Based Enterprise: Extend the digital product definition outside of design engineering and into the hands of the extended enterprise.
  - Product Development Foundation: Accelerate ideation and design as a product development foundation.

- **Construction Equipment and Tools Management**
  - Manage equipment use for maximum return on investment proactively.

- **EHS Incident Management**
  - Identifying, analyzing, and resolving safety issues and learning from incidents.

- **Mobile Inventory Management**
  - Optimize stockroom productivity through efficient mobile inventory management.

- **Travel Management with automated receipt recognition**
  - Integrate all travel and expense data from request to reimbursement, managing employee travel spend all in one cloud-based system.

- **Project Controlling and Accounting**
  - Understand and optimize project and engagement profitability with SAP S/4HANA.

- **Predictive Modeling**
  - Create high-performance predictive modeling by automating or choosing algorithms including your own.

- **Project Planning and Execution and Monitoring**
  - Streamline on-time, accurate project planning and execution and monitoring with SAP S/4HANA.

- **Project Collaboration**
  - Collaborate with project team members and customers in one channel.

- **Project Knowledge Management**
  - Collect, store, share, and track project information.

- **Time Sheet**
  - Enable accurate workforce payments and activity-based accounting by providing comprehensive time sheet capabilities.

### Project Logistics

- **Optimize resource planning and scheduling with streamlined project logistics in oil and gas.**

- **Construction Equipment and Tools Management**
  - Manage equipment use for maximum return on investment proactively.

- **EHS Incident Management**
  - Identifying, analyzing, and resolving safety issues and learning from incidents.

- **Mobile Inventory Management**
  - Optimize stockroom productivity through efficient mobile inventory management.

- **Travel Management with automated receipt recognition**
  - Integrate all travel and expense data from request to reimbursement, managing employee travel spend all in one cloud-based system.

- **Project Controlling and Accounting**
  - Understand and optimize project and engagement profitability with SAP S/4HANA.

- **Predictive Modeling**
  - Create high-performance predictive modeling by automating or choosing algorithms including your own.

- **Project Planning and Execution and Monitoring**
  - Streamline on-time, accurate project planning and execution and monitoring with SAP S/4HANA.

### Shutdown, Turnaround, and Outages

- **Optimize structured, turnarounds, and outages operations for transparency in real-time use and instructions.**

- **Project Management**
  - Help ensure the safety of employees and assets and reduce incidents during turnaround execution.

- **Project Planning and Execution and Monitoring**
  - Streamline on-time, accurate project planning and execution and monitoring with SAP S/4HANA.
