www.sap.com

---

**Objectives**
- Eliminate manual processes and redundant work
- Standardize and synchronize project management processes
- Manage single and multiple projects ad hoc efficiently and cost-effectively
- Handle diverse project portfolios and offer self-service reporting functionality

**Why SAP**
- Software support for multiproject management, including functionality to compare different projects
- Ability to gain insights into project costs and budget

**Resolution**
- Implemented the SAP Portfolio and Project Management application to plan and manage R&D projects and portfolios
- Smoothly integrated with financial and controlling data from SAP software

**Benefits**
- Fully integrated processes, including visualization and real-time reporting with SAP Lumira® software*
- More transparency and higher quality with one consistent global database
- Visualizations of portfolios based on real-time data

---

*SAP Lumira is now known as SAP BusinessObjects™ Lumira.

---

"SAP Portfolio and Project Management provides us with a single source of information for project data, which can be easily visualized and analyzed with SAP Lumira. In this manner, I can quickly give dynamic answers specific to management requirements."

Dr. Lisa Mayer, Multiproject Manager, Biotest AG
