SAP® Solutions
SAP® Business ByDesign®
solution

De La Rue provides governments and commercial organizations with the products and services that enable countries to trade, companies to sell, economies to grow, and people to move securely around an ever-more-connected world. With the help of itelligence, De La Rue deployed SAP Business ByDesign to help continue to stand firm in its fight against counterfeit and fraud.

Before: Challenges and Opportunities

- Multiple systems in multiple locations running different processes on different systems, many of which were inadequately supported
- Time lost pulling data from the system to make the best business decision possible
- Need for a solution that serves as a platform across the company to support state-of-the-art business processes with consistent, real-time data in a unified way

Why SAP and itelligence

- Cloud-based solution that is flexible and can be deployed across the globe quickly and easily
- Modern user interface backed by powerful analytics

After: Value-Driven Results

- One consistent blueprint on how to do business across the company
- Shared services center, which groups common processes and procedures together and increases efficiency
- Increased focus on managing the business, rather than just managing staff to get work done
- One-click analysis of the overall spend across suppliers compared to manually pulling and consolidating data from different systems

“With SAP Business ByDesign, we move toward one blueprint on how to do business across the company, equipping people to focus on what they do best and with the data to make the best possible decisions.”

Keith Robinson, Finance Transformation Program Director, De La Rue Plc.
